Exercise

1. Assume that the time taken to bake a batch of cookies is normally distributed with mean 45 minutes and standard deviation 2 minutes.

i. Generate a random sample of size 25 for the baking time.

```
1  #Part_01
2
3  set.seed(123)
4  sample_data <- rnorm(25, mean = 45, sd = 2)
5  sample_data
```

```
> set.seed(123)
> sample_data <- rnorm(25, mean = 45, sd = 2)
> sample_data
 [1] 43.87905 44.53965 48.11742 45.14102 45.25858
 [6] 48.43013 45.92183 42.46988 43.62629 44.10868
[11] 47.44816 45.71963 45.80154 45.22137 43.88832
[16] 48.57383 45.99570 41.06677 46.40271 44.05442
[21] 42.86435 44.56405 42.94799 43.54222 43.74992
```

ii. Test whether the average baking time is less than 46 minutes at a 5% level of significance.

```
7  #Part_02
8
9  t.test(sample_data, mu = 46, alternative = "less", conf.level = 0.95)
```

```
> t.test(sample_data, mu = 46, alternative = "less", conf.level = 0.95)

        One Sample t-test

data:  sample_data
t = -2.8167, df = 24, p-value = 0.004776
alternative hypothesis: true mean is less than 46
95 percent confidence interval:
     -Inf 45.58124
sample estimates:
mean of x
 44.93334
```
